

P20854.A01

4. (Amended-Clean Text) The cell according to claim 1, wherein the hydrophobized polysaccharide is a polysaccharide characterized to contain a saccharide unit, at a ratio of 0.5 to 5 in average per 100 saccharide units that constitute the polysaccharide, whose primary hydroxyl group is a group represented by the formula:

wherein R represents an alkyl group or a sterol residue; m represents 0 or 1; and n represents a positive integer.

5. (Amended-Clean Text) The cell according to claim 3, characterized in that the sterol residue is cholesterol residue.

6. (Amended-Clean Text) The cell according to claim 1, characterized in that the polysaccharide is pullulan or mannan.

7. (Amended-Clean Text) The cell according to claim 1, characterized in that the antigen is a protein which is presented as an oligopeptide by an MHC class I antigen, and induces a cytotoxic T-cell.

10. (Amended-Clean Text) The cell according to claim 1, which is characterized to be used as a medicament for parenteral administration.

12 (Amended-Clean Text) The method according to claim 11 characterized in that an amount of the complex comprising a hydrophobized polysaccharide and an antigen is sufficient to induce cellular immunity.
